Manager, Transportation Services

Hello Vince.

We purchased several of your kits that included the Power Board / Lamp Board, the DC Motor Board, the Relay Board, the Wiring Harness board and finally the CAN Bus board with all the workbooks.

My goal was to help those that had limited training on Electrical Systems and use it as a review for those that already had a handle on it.

The initial Technicians were very happy to hear that we were going to give this class and came ready to learn.

There were some stumbling blocks at first in regards to some basic terms, for example, what is the difference between 1.0 Ohm and 10,000 Ohms. By the time we were half way through your program, the "light was on brightly" as they were able to build on your well-structured lesson plan.

We are already seeing improvements in reduced time diagnosing electrical faults and tendencies to parts-swap in an effort to fix the problem. Their confidence tackling these problems has increased to a level I never expected.

I am already getting complaints as to it taking so long for the rest of the Technicians into the class as we must fit it in with our normal schedules. These are complaints I like!

Thanks for your program and support. It is well worth it!

Kind Regards
